1/1 - (C) WPI / DERWENT
AN - 95-202831 §27!
AP - JP930266467 931025
PR - JP930266467 931025
TI - Enzyme compsn useful for prepn of hydrolysed food protein - contains prolyl endopeptidase, prolidase and prolinase obtnd from same microbe e.g. Pseudomonas species.
IW - ENZYME COMPOSITION USEFUL PREPARATION HYDROLYSIS FOOD PROTEIN CONTAIN PROLYL ENDO PEPTIDASE OBTAIN MICROBE PSEUDOMONAS SPECIES
PA - (ASAHI) ASAHI KASEI KOGYO KK
PN - JP7115969 A 950509 DW9527 C12N9/52 007pp
ORD - 1995-05-09
IC - A23J3/06 ; A23J3/34 ; A23L1/227 ; C12N9/52
FS - CPI
DC - D13 D16
AB - J07115969 An enzyme compsn contains prolyl endopeptidase, prolidase and prolinase originated from the same microbe. The microbe is pref a Pseudomonas genus or a Streptomyces genus. Also claimed is the. prepn of a hydrolysed protein in which a food protein, a partially digested prod of a food protein and a peptide originated from a food protein, are digested by the enzyme.
- ADVANTAGE - The protein is highly hydrolysed and the flavouring activity is enhanced. The ratio of free aminoacids having high flavouring activity such as aspartic acid, threonine, glutamic acid, proline and glycine is increased to provide a hydrolysed protein having high flavouring quality.
- In an example, Pseudomonas sp KU-22 was cultured and the microbe body was recovered by centrifugation and dialysed to give crude KU-22 enzyme soln. It has a prolyl endopeptidase activity of 0.14 U/ml, a prolidase activity of 0.64 U/ml and a prolinase activity of 1.3 U/ml. A crude HA-36 enzyme soln was also prepnd from a culture of Streptomyces xanthophaeus HA-36. It has a prolyl endopeptidase activity of 0.073 U/ml, a prolidase activity of 0.039 U/ml and a prolinase activity of 0.070 U/ml. A pg bone extract was treated with alkalase and the product was hydrolysed by the above crude KU-22 and HA-36 enzyme soln. Their decomposition rate was respectively 30.9 and 29.5%, compared to 22.7% for a control using distilled water. (Dwg.0/0)

ABSTRACT:

The present invention relates to polypeptides having carboxypeptidase activity and isolated nucleic acid sequences encoding the polypeptides. The invention also relates to nucleic acid constructs, vectors, and host cells comprising the nucleic acid sequences as well as methods for producing the polypeptides. The present invention further relates to methods of obtaining protein hydrolysates useful as flavor improving agents.

ABSTRACT:

The present invention provides amino acid sequences of peptides that are encoded by genes within the human genome, the protease peptides of the present invention. The present invention specifically provides isolated peptide and nucleic acid

molecules, methods of identifying orthologs and paralogs of the protease peptides, and methods of identifying modulators of the protease peptides.

ABSTRACT:

The present invention relates to methods for monitoring differential expression of a plurality of genes in a first filamentous fungal cell relative to expression of the same genes in one or more second filamentous fungal cells using microarrays containing filamentous fungal expressed sequenced tags. The present invention also relates to filamentous fungal expressed sequenced tags and to computer readable media and substrates containing such expressed sequenced tags for monitoring expression of a plurality of genes in filamentous fungal cells.

ABSTRACT:

Methods and compositions that can reduce the symptoms of autism in a human patient comprising administering a physiologically effective amount of one or both of a purified casomorphin inhibitor selected from the group consisting of a casomorphinase and a casomorphin ligand, and a physiologically effective amount of a purified gluteomorphin inhibitor selected from the group consisting of a gluteomorphinase and a gluteomorphin ligand, to a human patient in sufficient quantities to reduce the effects of the autism. In some embodiments, the compositions and methods further comprise a physiologically effective amount of an enkephalin inhibitor, preferably an enkephalinase, and a physiologically effective amount of an endorphin inhibitor, preferably an endorphinase.

ABSTRACT:

The present invention relates to methods of producing protein hydrolysates, comprising adding to a proteinaceous material one or more aminopeptidase(s) having glycine releasing properties and one or more additional proteases wherein the amount of glycine produced is greater than the amount of glycine produced by the one or more additional proteases alone under the same conditions.

ABSTRACT:

Methods and compositions that can reduce the symptoms of autism in a human patient comprising administering a physiologically effective amount of one or both of a purified casomorphin inhibitor selected from the group consisting of a casomorphinase and a casomorphin ligand, and a physiologically effective amount of a purified gluteomorphin inhibitor selected from the group consisting of a gluteomorphinase and a gluteomorphin ligand, to a human patient in sufficient quantities to reduce the effects of the autism. In some embodiments, the compositions and methods further comprise a physiologically effective amount of an enkephalin inhibitor, preferably an enkephalinase, and a physiologically effective amount of an endorphin inhibitor, preferably an endorphinase.

ABSTRACT:

Compositions and methods are provided to reduce opioid-related symptoms in a human patient of an exorphin selected from the group consisting of a gluteomorphin and a caseomorphin, comprising a physiologically effective amount of a purified casomorphin inhibitor selected from the group consisting of a casomorphinase and a casomorphin ligand, a physiologically effective amount of a purified gluteomorphin inhibitor selected from the group consisting of a gluteomorphinase and a

gluteomorphin ligand, and at least one of the group consisting of a physiologically acceptable carrier, adjuvant, excipient, buffer and diluent. In some embodiments, the compositions and methods further comprise a physiologically effective amount of an enkephalin inhibitor, preferably an enkephalinase, and a physiologically effective amount of an endorphin inhibitor, preferably an endorphinase. Preferably the caseomorphinase is dipeptidyl peptidase IV and the gluteomorphinase is tyrosinase or phenylalaninase.

ABSTRACT:

A method is provided for producing a peptidase capable of substantially completely hydrolyzing protein into its constituent amino acids which comprises culturing a strain of filamentous fungus, belonging to one of the species Aspergillus oryzae and Aspergillus soyae and characterized in that said strain is capable of producing said peptidase, in a nutrient culture medium containing at least one substrate selected from the group consisting of a fatty acid having 14, 16, 18 or 20 carbon atoms and a derivative of said fatty acid, and recovering said peptidase from said culture medium. It is particularly effective to use a combination of a sugar ester of a fatty acid and a vegetable oil as substrates in a liquid culture medium.

ABSTRACT:

A new enzyme, acid carboxypeptidase, whose significant characteristics are to give high activity at the low optimum pH, i.e., pH 1.5 to 5.5, and whose substrate specificity, molecular weight and other properties are entirely different from those of already known carboxypeptidase, is prepared by cultivating organism belonging to Aspergillus to obtain the crude enzyme solution and then purifying the above-obtained enzyme solution by one or more processes which include appropriately selecting and/or combining, of fractional precipitation, solvent precipitation, dialysis, various chromatographies, gel filtration. Said enzyme thereby obtained has the great advantage of enzymatically hydrolyzing protein and peptides within a low pH range where the danger of contamination is minimized.

BASIC-ABSTRACT:

Yellow koji mould peptidase contg. little proteinase is produced, in good yield, by liq. culture of yellow koji mould at pH 5.0-7.0 and collected by treating with a weakly acidic ion exchange resin. from the non-adsorbed fraction. The yellow koji mould includes Aspergillus oryzae, Asp. sojae, Asp. flavus, Asp. parasiticus, Asp. tamarii, Asp. Clavatoflavus, Asp. flavofurcatis, Asp. subolivaceus, and Asp. avanaceus. The peptidases produced include leucinoaminopeptidase, carboxypeptidase, aminopolypeptidase, (amino)-tripeptidase, and dipeptidase.
